

# Quick Installation

FLEXIBLE PANEL

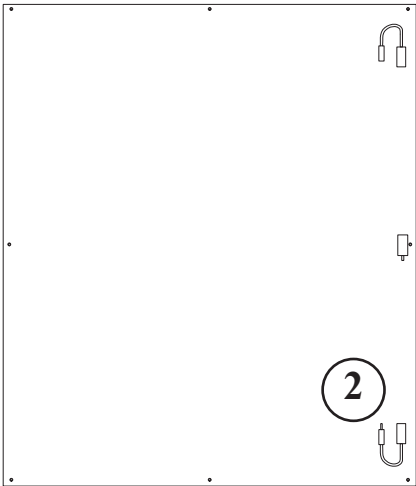

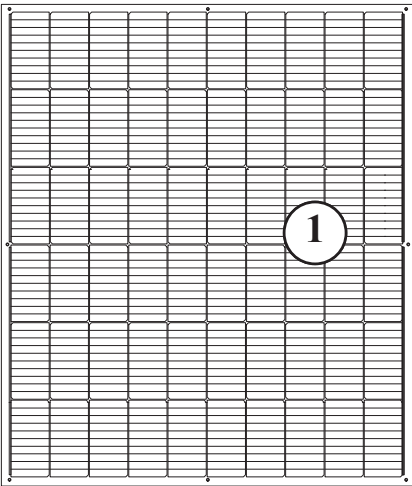

Bexie Group

1

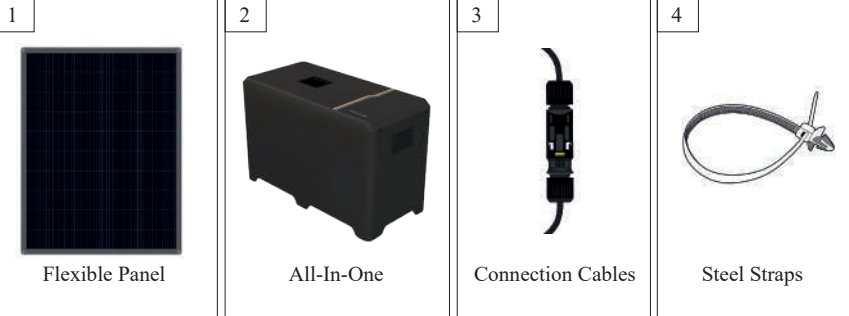

## APPEARANCE

It's composed of the following elements:

1. Flexible Panel (1130x900x3mm)
2. Connection cables
3. Steel Straps

To complete the installation and correct operation, several elements are required:

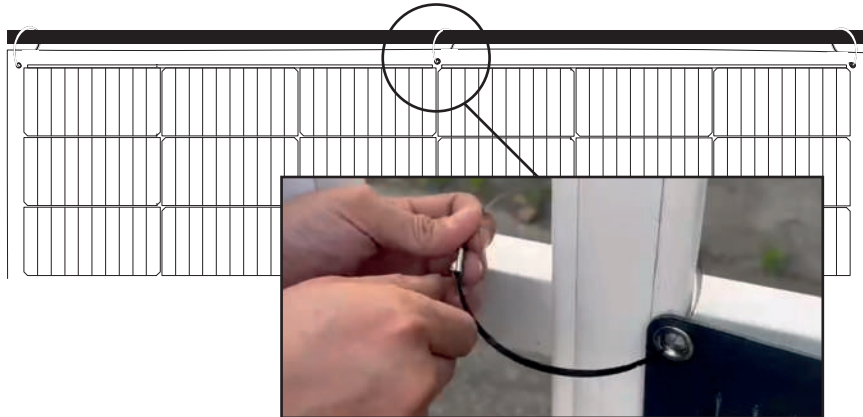

2

## INSTALLATION

Choose a location facing as far south as possible; it's important to avoid any shadows.

- 1 Place the panels, securing them to a fixed surface with steel straps

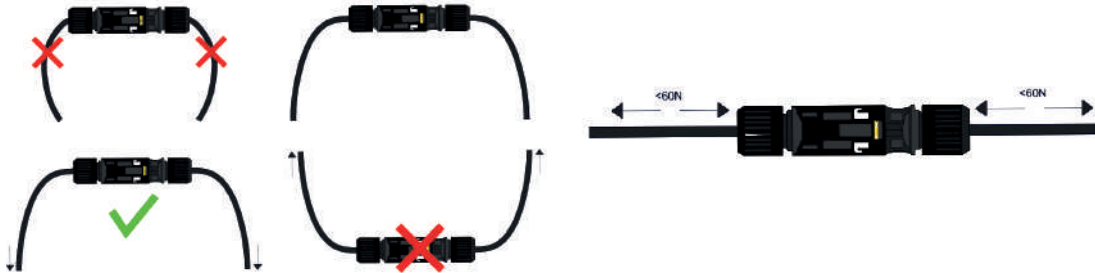

3

## CONNECTION

Before connecting the AC terminal, ensure that DC terminal are properly connected and all the switches are set OFF. Otherwise there is a risk of shock.

- 1 Connect the cables between the panels so that the panels are connected.

Be careful not to overbend the cable and ensure proper placement. These images show how to properly position it.

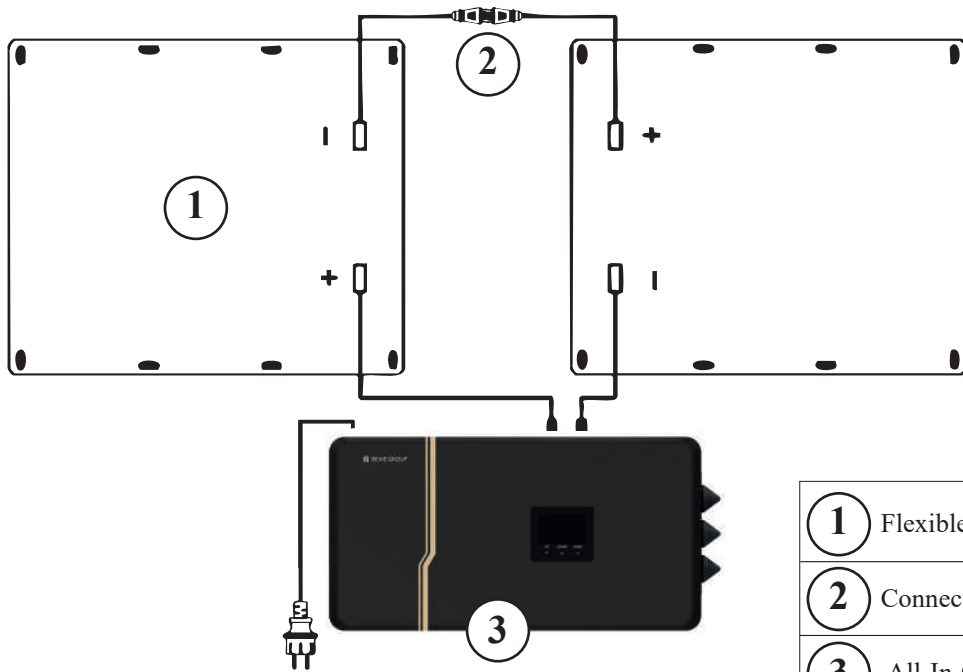

4

## INSTALLATION PROCESS

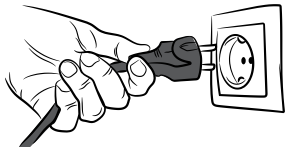

Before connecting the AC terminal, ensure that DC terminal are properly connected and all the switches are set OFF. Otherwise there is a risk of shock.

- 1 Install the All-In-One in a safe place and connect the solar panels to the All-In-One using the connection cables.

2

Plug it into the grid.

Wait a few minutes until the panels have enough sunlight for the All-In-One to turn on.
